MXCuBE3 release, and deployment at ESRF
● Review of main drivers
● Improving user experience
● MXCuBE on the web
● UI Overview
● Demo video(s)
Introducing MXCuBE3

After almost **two and half years** of development and over 2800 commits

Sep 13, 2015 – Jan 19, 2018

- Total of **16411 lines of code**
- With the joint effort of **a lot of people**
- We are finally **ready to deploy MXCuBE 3.0** (3.0.0-beta2) at ESRF
Commissioning and deployment started on ID29 in December 2017 and MXCuBE3 is to be used for this run
  - On top of BLISS deployed using Conda (talk by Matias Guijarro)

ID23-2 and ID30 A1 (MASSIF 1) will be installed next and the rest of the ESRF MX beamline will follow during the year
Reviewing the main drivers

Current UI layout is at its limits

User feedback from interaction with users and usage questionnaire

New requirements on software as new instruments and methods are introduced

Software environment evolves
Improving UX

- Context based navigation, functionality / information available when user needs it
  - Guides user
  - Cleans up interface

- Attempt to simplify the main use cases with more intuitive sequence of actions
  - Easier for user to understand what’s going on

- Managing information
  - Simplified queue
  - Search / filtering list of available samples

- Over all less clicks
  - Collect without need to actually save position and queue task
  - Keyboard and mouse shortcuts to position the sample

- … and much more
New platform - MXCuBE as a web application

- Improved remote access feature (remote by design)
- Easier client install (Especially good for remote users)
- Accessibility provided by web technologies,
  - Window scaling, font size, color selection, screen readers
- New architecture with REST interfaces, true decoupling of UI and backend makes it easier to adapt to changes and/or update UI.
- Easier to achieve seamless integration with other web based services, like ISPyB.
- Brings MXCuBE into a dynamic software development environment, where we can benefit from a large community of developers.
- Login view, perhaps in the future site customizable

- Possibility to login directly with proposal or user with one or several proposals
  - Proposal selection developed by MAX IV (Talk by Fredrik Bolmsten)
- Data collection view
Pro tip, use

- **Shift** + **DBL Click**: Move to beam
- **r** + **Mouse wheel**: Rotate sample
- **z** + **Mouse wheel**: Microscope zoom
- **f** + **Mouse wheel**: Microscope focus

Or, simply motor controls (located to the left)
Microscope / video controls:

- Light and zoom intensity changed by slider

- Video is streamed as MPEG-1, perhaps adaptive MPEG-4 in the future

- Possibility to select video stream size (particularly useful for remote users)

- With auto scale option

- Perhaps possibility so select compression ratio
- Right click context menu to add tasks

- Messages shown next to the queue during execution
Automatic execution is achieved by:
- “Automount next”, “Autoloop centring” and “Auto add diffraction plan”.
- The user no longer select Full/Semi automatic mode for the queue
- Now possible to interleave n data collections.

- Also possible to interleave any parameter like energy, kappa omega, resolution ...

- In the future pie chart like display, potentially with the possibility to change subwedge order

- The two principal wedges to be collected are shown in the task
- Mesh interface similar to MXCuBE 2
- Possibility to change transparency of grid
- Also possible to add centring point to cell
Sample grid contains available samples
- Synch with lims
- Filtering
- Results view
- Tasks to be executed

Sample grid context menu
- Preparing for automated execution by selecting multiple samples
- Use context menu to add tasks
Remaining features for 3.0:

- Remote access chat
- Remote access give away control
